

AI Prompt Used:

Write a C++ console-based program that generates creative excuses for missing homework or assignments based on a user's name. The program should ask for the student's name and should generate different excuses each time it runs.

Output:

The screenshot shows a Visual Studio Code editor with a C++ file named `StudentExcuseGenerator.cpp`. The code includes `<iostream>`, `<string>`, `<vector>`, and `<random>`. The `main` function prompts the user for their name. If the name is empty, it prints a message. Otherwise, it selects a random excuse from a vector of ten creative excuses. The terminal shows the program being compiled and run, with the user entering the name 'Arjun' and the program outputting a random excuse.

```
1 #include <iostream>
2 #include <string>
3 #include <vector>
4 #include <random>
5
6 int main() {
7     std::string name;
8     std::cout << "Enter the student's name: ";
9     std::getline(std::cin, name);
10
11     if (name.empty()) {
12         std::cout << "You didn't even provide a name! I guess that's an excuse in itself.\n";
13         return 0;
14     }
15
16     std::vector<std::string> excuses = {
17         "Sorry, Professor. (name)'s dog literally ate the entire flash drive.",
18         "(name) was abducted by aliens who needed help with their intergalactic calculus homework.",
19         "A sudden, localized black hole formed on (name)'s desk and swallowed the assignment.",
20         "(name)'s evil twin stole the homework to sabotage their GPA.",
21         "The Wi-Fi was out, the power went down, and a pack of wild raccoons barricaded (name) inside the house.",
22         "While (name) was writing the final paragraph, a bald eagle swooped in and carried the laptop away.",
23         "(name) accidentally coded a self-aware AI that deleted the project to protect humanity.",
24         "The homework was so brilliant that (name) had to lock it in a vault, and then lost the combination.",
25         "(name) got trapped in a time loop and has been doing the same Tuesday over and over again."
26     };
27
28     // Set up random number generator
29     std::random_device rd;
```

Terminal Output:

```
PS C:\Users\Rohan\Documents\AG> g++ -mconsole StudentExcuseGenerator.cpp
PS C:\Users\Rohan\Documents\AG> .\a.exe
Enter the student's name: Arjun

Generating the ultimate excuse...
*** A sudden, localized black hole formed on Arjun's desk and swallowed the assignment. ***
PS C:\Users\Rohan\Documents\AG>
```

AI Chat Interface (Right Panel):

Write a C++ console-based program that generates creative excuses for missing homework or assignments based on a user's name. The program should ask for the student's name and should generate different excuses each time it runs.
